Description

OneFeed is a social media aggregator - combining multiple user social media accounts into one feed. Logging into OneFeed will allow users to access multiple social media accounts, making their social media experience more convenient and streamlined.

Features

- Easy, secure registration and log in
- Access and interact with multiple social media feeds in one convenient dashboard
- Filter feed to view intended social media

Planning - User Stories

- As a potential user, I can register an account that stores my OneFeed data
- As a OneFeed user, I can log in to view my data
- As a OneFeed user, I can add and remove social media account info to my OneFeed account profile
- As a user of multiple social media accounts, I can use the OneFeed dashboard to view and filter my accounts

Planning - Database

User table contains

- Usernames
- Hashed passwords
- Social media login usernames
-

Technology Stack

- Language
 - Javascript
 - Java
- Framework
 - Angular
 - Spring Boot
- Database engine
 - MySQL
- Other libraries or components
 - Postman

Demo

What I Learned

- Connecting Angular front-end to a Spring Boot back-end
- Connecting an API
- Deeper understanding of git branches and merging

What's Next

- Upgrading UI
 - Use Tailwind or other CSS library
- Adding more social APIs using Postman
